Action on Access

Gallagher's Action on Access solution allows an operator to configure a set of sophisticated access rules. These rules can be used to automate when, where, and why a cardholder can access an area.

Take action

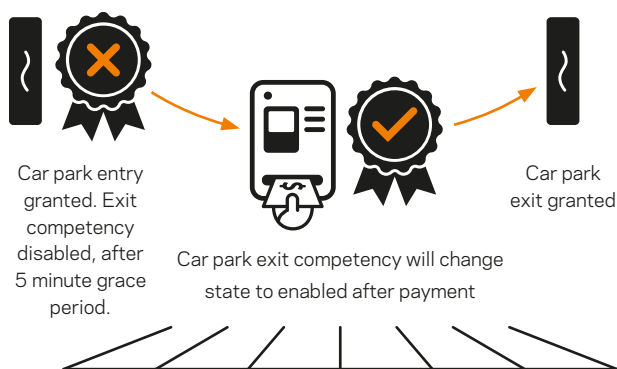

By presenting a card or Mobile Connect credential at a nominated reader, access can be enabled or disabled (card, competency, or access group membership) immediately or in the future. This provides the ability to set up sophisticated access rules using simple actions.

This solution controls when, where, and why a cardholder can access an area, based on previous movements. It has been used in a wide range of customer sites including universities, hospitals, airports, prisons, mines, and commercial. It also provides a useful way to manage temporary worker and contractor entry and time on site.

Enforce payment

Enforce payment prior to exit

Use case: A cardholder presents their credential at the car park entry reader. Entry to the car park is granted and the cardholder's competency is disabled, they can now no longer exit the car park. After payment at the car park terminal, the cardholder's competency is enabled. This competency is required to exit the car park.

Reconcile billable hours

Use case: Use Action on Access to specify the period of time a contractor can spend on site. This allows the site to easily reconcile the contractor's billable hours.

The contractor arrives on site. They pass their credential to the receptionist, who badges at the time and attendance reader. Access has now been given for a specified period of time, after which time the contractor will be unable to move around the site.

Comply with safety standards

View induction material

Use case: An employee traveling from a regional office to head office must view the head office induction material prior to entry.

The employee visits reception where they are shown the site's induction material. The receptionist then presents the employee's credential at a reader behind the desk, allowing site access for the day.

Regular safety tests must be conducted

Use case: Upon successful completion of a hazardous goods test, the test facilitator will enable access for three months, by presenting the test applicant's credential at a reader. After three months, the employee must complete the test again, in order to get access.

Reduce Risk

View daily hazards

Use case: To ensure the site's daily hazard information board is read, site access is allowed for the day, upon presentation of a credential at the reader located near the hazards board.

Identify employees prior to access

Use case: When an employee arrives on site they must visit reception where the receptionist confirms the identity of the employee and presents the employee's credential to a reader behind the desk, activating their card and allowing site access for the day.

Protect people and assets

Enforce quarantine protocols

Use case: An employee who has been in a quarantine zone, cannot enter the sterile zone until six hours has passed. The competency required to enter the sterile zone is disabled upon exit from the quarantine zone and will automatically re-enable in six hours' time.

Know when access is being taken

Use case: A security manager presents an employee's credential at a reader behind a desk. This allows the employee access to the key safe within the next 10 minutes, after which time the access expires.

Duty of care: Employee check-in

Use case: Check on your employees every few hours to ensure they are safe.

Employees at a major airport are required to check-in every two hours, by presenting their credential at the area's entry reader. This will enable access around the area for two hours, after which time they will need to request access again.

If the employee fails to check-in, a notification is automatically sent to the employee's supervisor containing the employee's contact details, whereby the supervisor can check to ensure the safety of their staff.
