

GEUTEBRÜCK

Geutebrück VMS and Gallagher Access Control High Level Integration

A bi-directional events integration between Command Centre and Geutebrück G-Core and G-SIM that allows either to be the front-end system.

The Integration features

Events can be viewed, alarms actioned, doors can be opened, and video can be viewed on either system.

In Command Centre the operator can view pop up videos associated to the event such as a forced door or a license plate from a car entering the field of view.

Pop up videos can be placed in maps, where they can play stored footage from an event or show live footage.

Trigger a macro to move a PTZ to a predefined position.

Using license plate recognition, the plate becomes a credential to allow a card holder through a roller door or boom gate or use as part of a dual authentication through the card holders access rights.

View multiple live videos as a spot monitor in command center.

Alarm events in Gallagher's such as a forced door can send a command to GCore/GSIM to pop up an alarm scene on the video wall.

Technical Functions

View Live and Stored Video	Play, Pause, Rewind, Fast Forward	Slow play/Slow rewind	Pan/Tilt/Zoom PTZ Cameras	Go to Preset PTZ Cameras	Events Interface	Number Plate Recognition
Yes	Yes	Yes	Yes	Yes	Yes	Yes
