

# Mobile Connect App

The Gallagher Mobile Connect App allows users to open doors, perform actions and store Digital IDs with their mobile device.

## Mobile Connect App

Mobile Connect interfaces directly with Gallagher's T-Series Multi Tech readers, allowing users to:

- Store access credentials for multiple sites on their device
- Use NFC technology for access with Android
- Use Bluetooth® wireless technology for access with iOS and Android
- Store their fingerprint or PIN data on the mobile device, privately and securely using FIDO open standard authentication security
- Interact with building systems and perform actions such as turning on lights or heating, opening doors remotely or setting alarms
- Receive important site notifications on the devices lock screen and click to view additional detail.

## Convenient credential management

Every Command Centre license receives five free mobile credentials. Setup and provisioning for users is a simple process, as is the management of mobile credentials within Command Centre. Benefits include:

- Eliminating the replacement cost of lost/stolen cards (including the time spent on administration). Users are less likely to lose their mobile device than an access card
- Remote provisioning, allowing access to be set up in advance of a user attending site. Perfect for managing temporary site users (e.g. contractors). Schedule when credentials are enabled and expire
- Two factor authentication for added security. If required users can be directed to use a second authorization step (like fingerprint or PIN) on the mobile device to gain access to select areas.

## Secure Mobile Access

Downloadable from the Apple App and Google Play stores, Mobile Connect allows mobile devices to be used as access credentials with Gallagher T-Series Multi Tech, SALTO BLE\* and Aperio BLE\*\* readers.

\*Requires Command Centre v8.10 or later.

\*\*Requires Command Centre v9 or later.

## Secure Mobile Credentials

Using FIDO Certified authentication, the Gallagher platform ensures that user credentials are safe and secure using a globally recognized method of authentication.

## Control your Environment

Mobile Connect makes it possible for users to perform a number of tasks such as arming an Alarm Zone, changing the Access Mode for a door, turning on lights and air conditioning, or logging on to readers to perform alarm management functions. Anything that a system output can do can also be done from Mobile Connect when in range of a Gallagher T-Series Multi Tech readers.

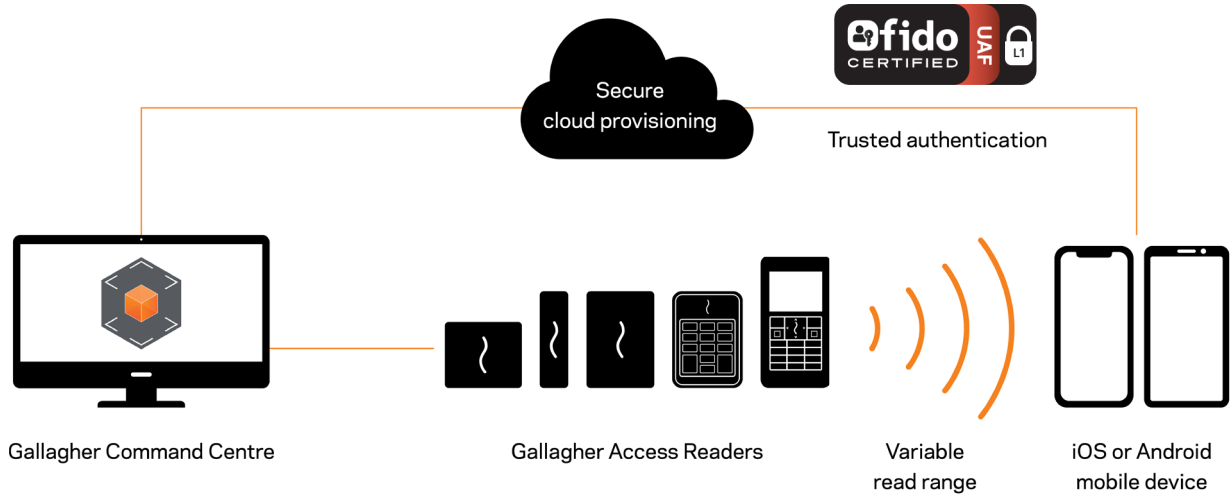

## Mobile Connect Digital ID

Mobile Connect provides the ability to have a secure, on-phone digital alternative to the traditional ID card. Mobile Connect Digital IDs:

- Can be issued remotely and securely, reducing the need for physical contact
- Remove the need to print physical ID cards and maintain printers to do so
- Eliminate the cost and inconvenience of replacing lost or stolen ID cards
- Allow for multiple cards to be issued and stored on the one Mobile Connect credential
- Increase the convenience for users and reduce the likelihood of IDs being forgotten, lost or stolen.

# System Architecture

\*Functionality is available from Command Centre v7.60 and requires Gallagher T-Series Multi Tech readers, and suitable mobile devices.

## Technical Specifications

Product numbers			
Software			
Mobile Connect Credential (one per user)	2A8571	Mobile Connect Credential	FREE Mobile Connect App

Readers
