1 Introduction

This release note is for the 'Alcolizer' v8.50.08 feature of Gallagher Command Centre.

1.1 Purpose

This feature integrates Command Centre with the Alcolizer WM4 and Centurion breath testing units.

When an access card is presented at a nominated reader, the Alcolizer is initiated for the Cardholder to take a Blood Alcohol Content (BAC) or Breath Alcohol Concentration (BrAC) test. Once the test is taken, the Alcolizer unit sends the test result (Pass or Fail) to Command Centre and Command Centre records the result as an event against the Cardholder.

If the Alcolizer does not send a pass/fail result, Command Centre makes the pass/fail decision by comparing the test result against the configured 'Pass Threshold' value.

1.2 Functionality

- This feature enables Command Centre to generate an alarm based on a failed test result, alerting the operator of the Cardholder's failed test result at the time of the failed result.
- This feature enables Command Centre to automatically deny site access and disable a Cardholder's Competency when a test is failed at the Alcolizer. A passed test result can be configured to enable or activate the Cardholder's Competency for a set period of time.
- This feature can be used in conjunction with the licensed Notifications feature. An operator can configure a notification to automatically notify the Cardholder's supervisor via an email and/or SMS, at the time of a failed result.
- This feature can be used in conjunction with the licensed Random Selection feature. If the Cardholder is randomly selected, the Cardholder is prompted for an Alcolizer test. The Alcolizer unit can be configured on the same Door that the Random Selection feature is configured on, or a different Door. The selected Cardholder is denied access and the Cardholder's competency is disabled. A passed test result can be configured to enable or activate the Cardholder's Competency for a set period of time.

1.3 Reporting

An operator can configure a Command Centre Activity Report or Configuration Client Activity Report to report the following Alcolizer events:

- Cardholder Failed
- Cardholder Passed
- Cardholder Alcolizer Action Error
- Failed to get Alcolizer Response
- Failed to Modify Cardholder after Alcolizer Action
- Failed to obtain COM Port

An operator can configure a Configuration Client Site Configuration Report to report the configuration of one or more Alcolizer Command Centre items.

1.4 Implementation

This feature can be implemented using one of the following methods:

1. Dual Authorisation

Dual Authorisation enforces compulsory breath testing at a Door.

A passed test result is used as the second access credential for a Door whose entry Access Zone has been configured for Dual Authorisation. A passed test result can be configured to enable the Cardholder's Competency or activate the Cardholder's Competency for a set period of time.

A failed test result will deny access for a Door whose entry Access Zone has been configured for Dual Authorisation. A failed test result will disable the Cardholder's Competency.

2. The Random Selection feature

Using the licensed Random Selection feature in conjunction with the Alcolizer feature allows for selection of Cardholders for both compulsory and random breath testing.

If a Cardholder is randomly selected, the Cardholder is denied access and the Cardholder's competency is disabled. It can be configured so that on passing an Alcolizer test the Cardholder's Competency is enabled or activated for a set period of time. For details on how to configure the Alcolizer feature with Random Selection, refer to the topic "*Random Selection*" in the Gallagher Command Centre Help.

1.5 Compatibility

This feature supports the following Gallagher software:

- Gallagher Command Centre vEL8.50.1414 (or later vEL8.50 release)
- Gallagher Controller 6000 vCR8.50.210623c (or later vCR8.50 release)

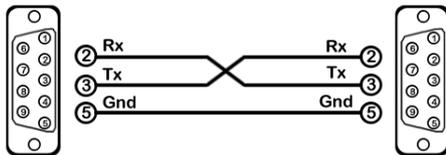

Command Centre and this feature have been tested using the following:

- Command Centre Server: Windows Server 2016, Windows Server 2019
- Command Centre Workstation: Windows 10 (64-bit)
- Database: SQL Server 2019 Express

This feature has been tested using the Alcolizer WM4 and Centurion breath testing units.

This feature has been tested in a Command Centre multi-server environment.

This feature has been tested using a DE-9 null modem serial cable between the Controller and the Alcolizer unit.

This version of this feature supports the Australian Standards AS3547:2019 and AS3547:1997. For more information, refer to <https://www.alcolizer.com/fag/new-certifications-bac/>

The Access Zones used with this feature cannot be used in conjunction with any other feature that utilises the Dual Authorisation functionality of Command Centre (i.e. Challenge or Dual Authorisation).

Ensure the operator using this feature has **not** been assigned the View Challenge or Controlled Challenge operator privileges.

1.6 Security consideration

- **Network security**

The Alcolizer unit does not need to be connected to a network for the Gallagher 'Alcolizer' feature. If you want to connect the unit to a network, you should do your own security assessment. Gallagher has not assessed the security of the Alcolizer unit over Ethernet.

2 Installation

Note: If a previous version of this integration has been installed and you are upgrading to a newer version, skip section 2 "Installation" and refer to section 9 "[Upgrading](#)" later in this release note.

To install this feature, perform the following procedures:

- 2.1 Running the installation executable
- 2.2 Adding the 'Alcolizer' DLL to Controllers

2.1 Running the installation executable

1. Perform a backup of your Command Centre system.
2. Ensure your licence file contains the following options:

```
[Limits]
Alcolizer=X
```

Note: X is a number that represents the number of Alcolizer units that can be connected to Command Centre.

```
[Limits]
Competencies=X
```

Note: X is a number that represents the number of Competencies your site can create.

```
[Features]
Notifications=1
```

```
[Customisations]
Alcolizer=1
```

3. Exit Command Centre and stop the FT Command Centre Service.
4. On all Command Centre Servers and all Command Centre Workstations, install Command Centre vEL8.50.1677 (or later vEL8.50 release) from the Command Centre installation media, if not already installed.
5. Unzip the file you have been provided and run the installation executable **AlcolizerSetup_8.50.xx.msi** on all Command Centre Servers and all Configuration Client Workstations.

Click-Once installation

This feature supports Click-Once deployment, meaning you do not need to install the customisation on Command Centre Client/Configuration Client Workstations deployed via Click-Once. These Workstations automatically download the customisation from the Command Centre Server.

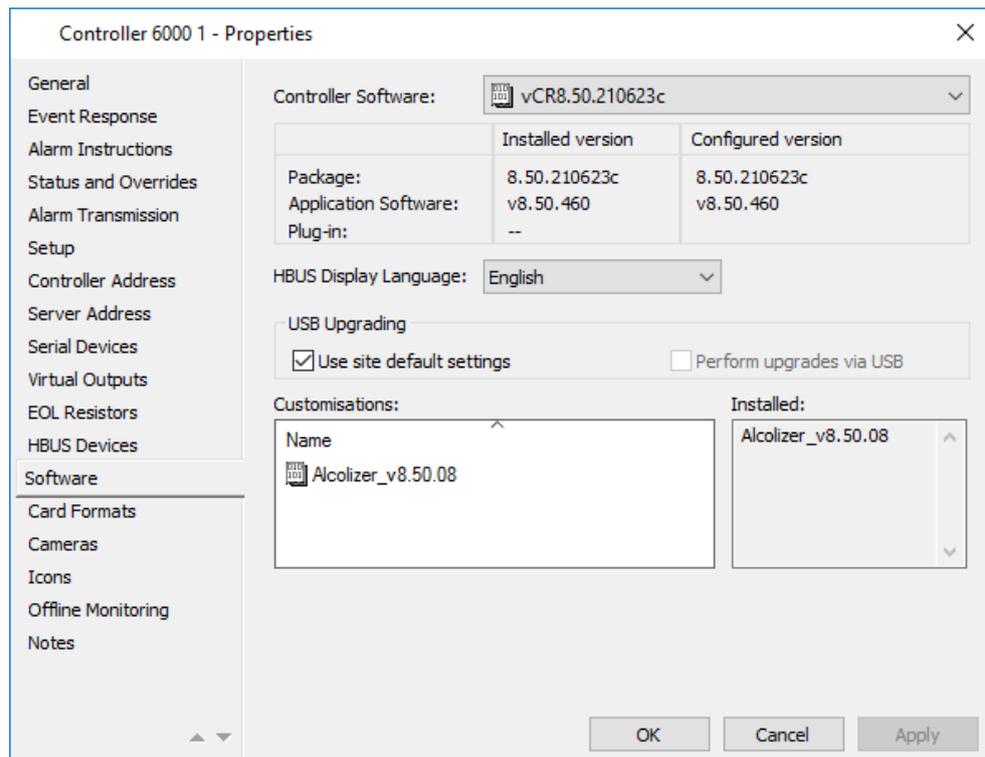

6. Restart the FT Command Centre Service and Command Centre.
7. To ensure that the 'Alcolizer' feature has installed correctly, check the following:
 - Select **Help > About Command Centre** from the Gallagher Configuration Client menu bar. The entry 'Alcolizer v8.50.xx' should be displayed in the Customisations field.
 - Select the **Programs and Features** utility from the Windows Control Panel on the Command Centre Server. The program 'Gallagher Alcolizer' should be listed as installed.

2.2 Adding the 'Alcolizer' DLL to Controllers

1. Open the Device Software window (via **Configure > Device Software** from the Gallagher Configuration Client menu bar).

The Controller Customisation item 'Alcolizer_v8.50.xx' should be present.

2. Open the properties for each Controller that is connected to an Alcolizer unit.
3. Click the **Software** tab.

4. Drag (or copy and paste) the Controller Customisation item 'Alcolizer_v8.50.xx' from the Device Software window to the 'Customisations' grid on the Controller's **Software** tab.

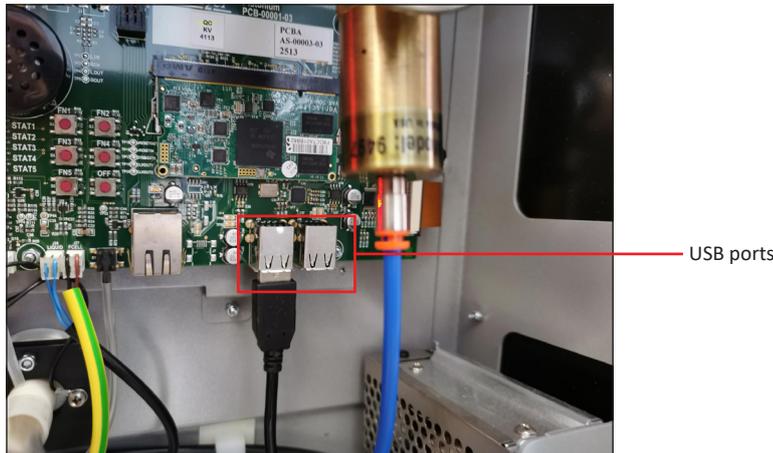

5. Click the **Apply** button.

The Controller will download the 'Alcolizer' DLL and then restart. When the Controller has restarted, the **Software** tab will show Alcolizer_v8.50.xx in the 'Installed' column.

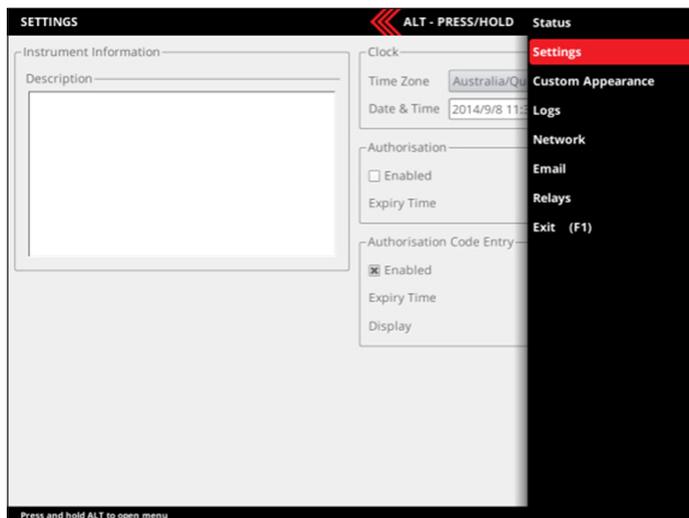

3 Alcolizer initialisation

The following instructions describe how to enable/disable 'Authorisation' on an Alcolizer WM4 breath testing unit.

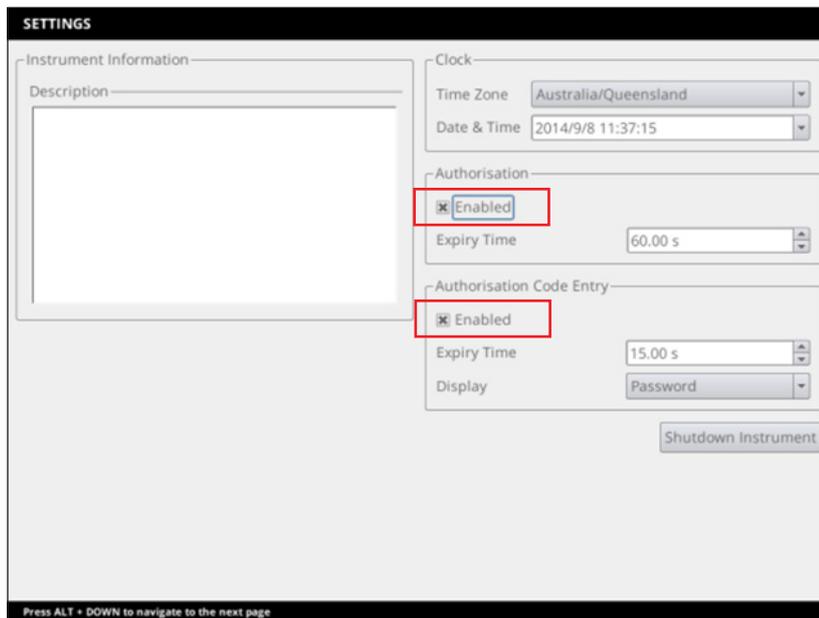

1. Open the WM4 breath testing unit.

2. Connect a USB keyboard into one of the four USB ports. The USB connection points can be found on the lower right side of the PCB, looking at the back of the unit. A mouse can also be connected in the same way.
3. Press the **F1** key to access the WM4 USER menu area.

4. Press the **LEFT ALT** key to bring up available menu choices.
5. Use the **ARROW DOWN** key and move down to **Settings**.
6. Press **LEFT ALT** to hide the menu and give clear access to the **Settings** page.

7. Press the **TAB** key eight (8) times or use a mouse to focus on the **Authorization Enabled** check box, and press the **SPACE BAR** to select the check box.
8. Ensure that the **Authorization Code Entry** is selected as well. Authorization has now been set and is on.
9. Press the **F1** key to exit the menu. The screen will now alternate between 'Authorization Required' and the Alcolizer Technology banner.

10. Remove the keyboard, mouse, etc., and close the WM4 breath testing unit.

4 Configuration

The Alcolizer feature can be configured using one of two methods. Refer to section 1.4 "[Implementation](#)" earlier in this release note for a description of each. Choose **one** of the following sections to configure the Alcolizer feature:

- Perform section 5 "[Dual Authorisation Configuration](#)" to configure the Alcolizer feature using Dual Authorisation.
- Perform section 6 "[Random Selection Configuration](#)" to configure the Alcolizer feature using the Random Selection feature.

5 Dual Authorisation configuration

This section describes how to configure the Alcolizer feature using Dual Authorisation.

Perform the following procedures in Gallagher Configuration Client:

- 5.1 Configuring Dual Authorisation
- 5.2 Configuring an Alcolizer
- 5.3 Assigning an Alcolizer to a Controller

5.1 Configuring Dual Authorisation

Configure the entry Access Zone of a nominated Door for Dual Authorisation.

Notes:

- Dual Authorisation must be configured for the nominated Door (i.e. the Door where a BAC/BrAC test must be completed before the Cardholder can enter).

On the **Access Mode** tab of the entry Access Zone for the Door, ensure the **Schedule** assigned has been configured to always be in 'Dual Auth - No PIN' mode.

For help configuring Schedules, refer to the topic "[Schedules](#)" in the Gallagher Configuration Client Help.

Access Zone 1 - Properties

General
Event Response
Alarm Instructions
Status and Overrides
Access Mode
Dual Authorisation
Advanced
Triggered Overrides

Salto Options
Icons

Schedule

Code only code

First Card Unlock
 Scheduled 'Free' state is secure until privileged cardholder is granted access
 PIN Required

Cardholder Overrides

	When zone in Mode 1:	When zone in Mode 2:
Display Name	<input type="text" value="Secure - No PIN"/>	<input type="text" value="Free - No PIN"/>
Access mode	<input type="text" value="Secure"/>	<input type="text" value="Free"/>
PINs mode	<input type="text" value="No PIN"/>	<input type="text" value="No PIN"/>

- On the **Dual Authorisation** tab of the entry Access Zone, the First Card Access Group should be one that the Cardholders to be breath tested belong to. The Second Card Access Group should be one that the security personnel belong to. In the event the server goes offline, a security guard can badge a second card to grant access to the Cardholder.

Access Zone 1 - Properties

Limit Dual Authorisation to these Access Groups

First Card: Employee Access Group

Second Card: Security Management Access Group

OK Cancel Apply

- This Door must be configured with an appropriate timeout that limits how much time the Cardholder has to take their breath test.

Site Door 1 - Properties

Lock type: Mortise Access is via turnstile:

Door is confirmed as closed after: 200 Milliseconds

If lock attempt fails, alarm after: 20 Seconds

Retry the lock: Door unlock time: 5 Seconds

Card to complete action must be presented within: 60 Seconds

PIN (for PIN entry) failed if not entered correctly within: 10 Seconds

Door warns 'Open Too Long' if still open after: 20 Seconds

Door is 'Open Too Long' if still open after: 20 Seconds

Door is 'Forced Open' if opened while still locked:

Door lock status follows entry zone only:

Play tone on HBUS readers while door is unsecured:

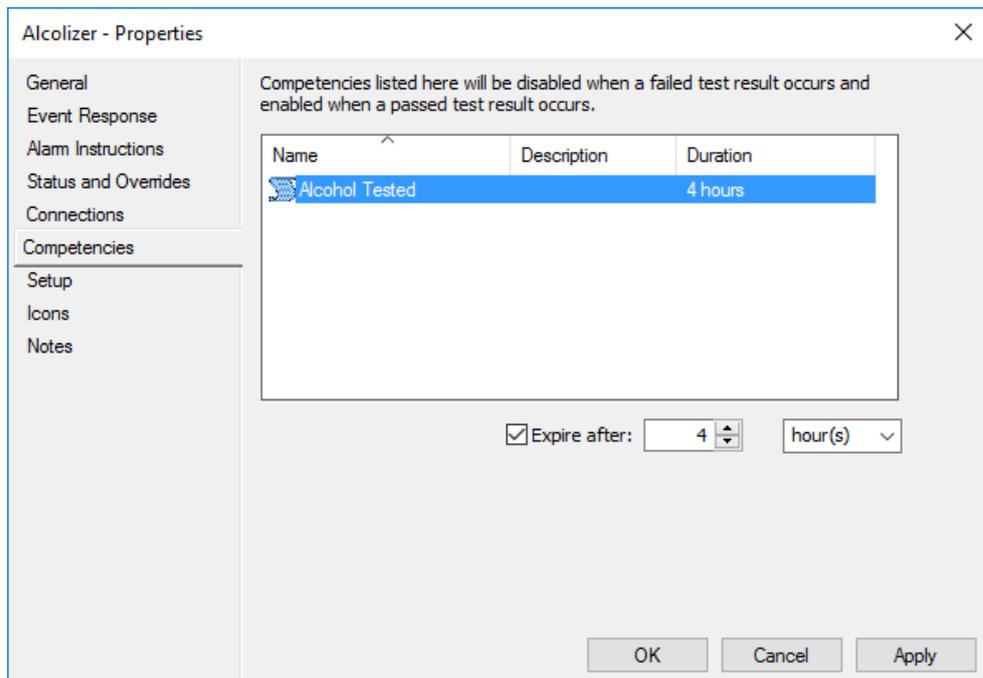

Play tone on HBUS readers when door is released:

Extended access time: 25 Seconds

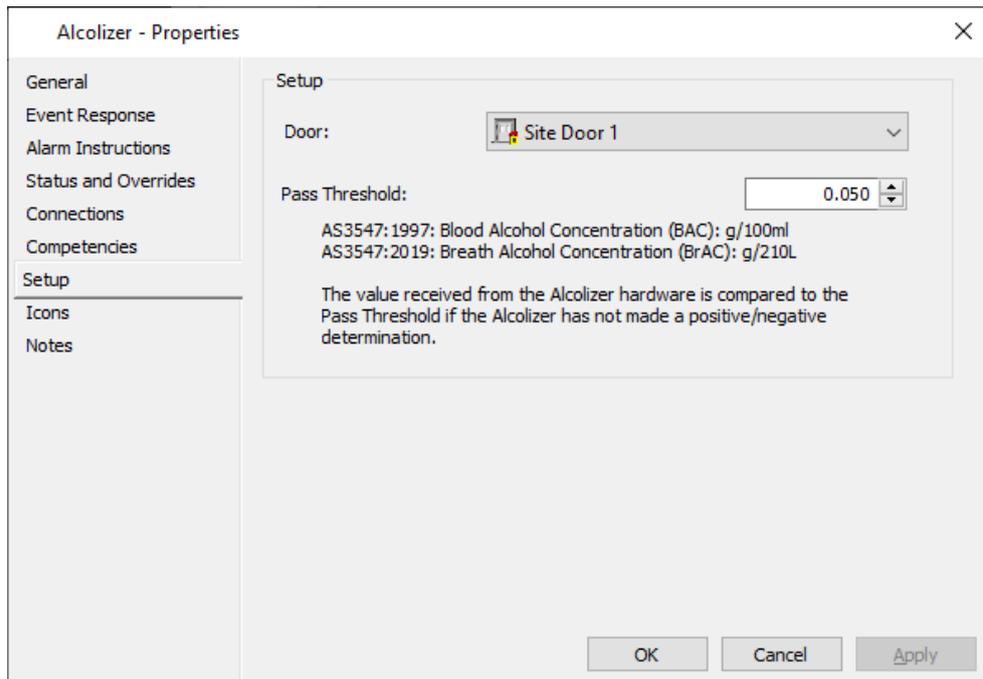

OK Cancel Apply

5.2 Configuring an Alcolizer

1. Click **Configure** from the menu bar, then **Hardware**. The **Hardware** window opens.
2. Right-click and select **New... > RS232 Device > Alcolizer**. The **General** tab displays.
3. Complete the fields as required.
4. Click the **Event Response** tab, and configure as required.
5. Click the **Alarm Instructions** tab, and configure as required.
6. Click the **Competencies** tab.

7. Assign the Competencies to be managed by this Alcolizer. The Competencies listed here will be enabled for a Cardholder when a passed test result occurs and disabled for a Cardholder when a failed test occurs.
Note: Ensure that the Competencies assigned here have been added to the appropriate Cardholders (the Cardholders to be breath tested).
8. To have a previously-disabled Competency enabled for only a limited time after a passed test result, select the Competency and select the **Expire after** check box. Enter the period that the Competency will be enabled for. Maximum 99 minutes, 99 hours, or 10 days.
Notes:
 - The **Expire after** setting does not apply to Competencies that were already enabled before the Cardholder passed the breath test.
 - If the **Expire after** check box is unchecked, then after a Cardholder passes a breath test, the Competency will be enabled with no expiry.
9. Click the **Setup** tab.

10. From the Door drop-down list, select the **Door** that will initiate the Alcolizer unit.

Notes:

- When a Cardholder presents their card at the reader assigned to the Entry Zone of this Door, the Alcolizer unit is initiated for the Cardholder.
- If a Competency has been assigned to the entry Access Zone for this Door and that Competency is either disabled, expired, or missing for the Cardholder, access is denied. The Alcolizer unit will not be initiated for the Cardholder.

11. Configure the **Pass Threshold** as required.

Command Centre only uses this value to make a pass/fail decision if the Alcolizer unit does not send a positive/negative determination to Command Centre. In this case, if a Cardholder's BAC/BrAC result is greater than or equal to the 'Pass Threshold' value, they fail the breath test.

Unit of measurement: A single pass threshold value is used (rather than one for BAC and one for BrAC) because a value as a BAC measurement is approximately equal to the same value as a BrAC measurement (e.g. 0.05 g/100ml (BAC) \approx 0.05 g/210L (BrAC)).

12. Click **OK** to close and save your changes.

5.3 Assigning an Alcolizer to a Controller

Note: An Alcolizer is connected to the RS232 port of a Controller, so only one Alcolizer can be assigned per Controller.

1. From the Hardware window, open the properties of the Controller that the Alcolizer is connected to.
2. Click the **Serial Devices** tab, then select the Alcolizer that is connected to this Controller from the **Alcolizer** drop-down list.
3. Click **OK** to close and save your changes.

6 Random Selection configuration

This section describes how to configure the Alcolizer feature to use the licensed Random Selection feature.

Note: The configuration provided in this section is an example of how the Random Selection feature can be configured in conjunction with the Alcolizer feature. Your site requirements may differ from those shown here.

Perform the following procedures in Gallagher Configuration Client:

- 6.1 Creating a Door for Random Selection
- 6.2 Configuring a Door to initiate the Alcolizer unit
- 6.3 Configuring Access Groups
- 6.4 Configuring a Competency
- 6.5 Configuring Access Zones
- 6.6 Configuring Random Selection
- 6.7 Configuring an Alcolizer
- 6.8 Assigning an Alcolizer to a Controller

6.1 Creating a Door for Random Selection

If not already configured, create the Door that will be used to randomly select Cardholders. Refer to the topic "*Creating Doors*" in the Gallagher Configuration Client Help.

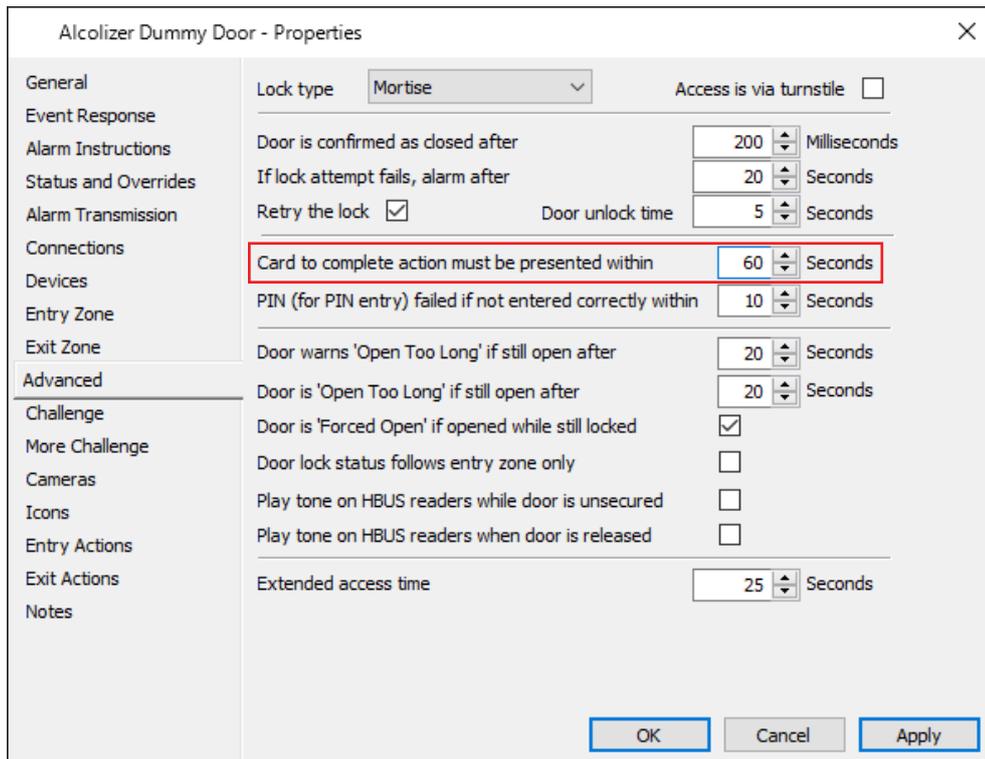

6.2 Configuring a Door to initiate the Alcolizer unit

When a Cardholder presents their card at the Reader assigned to the Entry Zone of the Door, the Alcolizer unit will be initiated for the Cardholder.

Depending on your site requirements, you can use the Door previously created. Alternatively, if the Cardholder is randomly selected and the Alcolizer unit is located elsewhere (i.e. in a medical room), the Cardholder will need to initiate the Alcolizer unit when they arrive at the unit. In this example, a second reader would be located near the unit and assigned to a dummy Door Command Centre item.

The dummy Door must be configured with a timeout long enough to allow the Cardholder to take their breath test. A dummy Access Zone for the dummy Door must be configured and must use the same Competency (but not enforced). This will allow the Cardholder to badge and use the Alcolizer to re-enable the Competency, following a passed test result.

The timeout is determined by the 'Card to complete action must be presented within' option on the Door's 'Advanced' tab.

6.3 Configuring Access Groups

If not already configured, create the Access Groups containing the Cardholders that will be randomly selected. Refer to the topic *"Setting up Access Groups"* in the Gallagher Configuration Client Help.

6.4 Configuring a Competency

If not already configured, create the Competency (e.g. 'Alcohol Tested') that will be disabled when a Cardholder is randomly selected at a Door. Refer to the topic *"Configuring Competencies"* in the Gallagher Configuration Client Help.

Assign this Competency to Cardholders who are available for selection.

6.5 Configuring Access Zones

If not already configured, configure the appropriate Access Zones on your site so that Cardholders require the previously-created Competency to enter these Zones. Refer to the topic *"Adding Competencies to Access Zones"* in the Gallagher Configuration Client Help.

6.6 Configuring Random Selection

For details on how to configure the licensed Random Selection feature of Command Centre, refer to the "Random Selection" chapter in the Gallagher Command Centre Help.

Notes:

- Configure the previously-configured competency (e.g. 'Alcohol Tested') to be expired or disabled upon Cardholder selection.
- Gallagher recommends that you limit the maximum number of selections for any given Cardholder within a specified amount of time. If not, a Cardholder may be re-selected no matter how recently they completed a BAC/BrAC test, and have to repeat the BAC/BrAC test.
- Both T20 and non-T20 readers can be configured to an Alcolizer unit.

6.7 Configuring an Alcolizer

1. In Gallagher Configuration Client, click **Configure** from the menu bar, then **Hardware**. The **Hardware** window opens.
2. Right-click and select **New... > RS232 Device > Alcolizer**. The **General** tab displays.
3. Complete the fields as required.
4. Click the **Event Response** tab, and configure as required.
5. Click the **Alarm Instructions** tab, and configure as required.
6. Click the **Competencies** tab.

Alcolizer - Properties

General
Event Response
Alarm Instructions
Status and Overrides
Connections
Competencies
Setup
Icons
Notes

Competencies listed here will be disabled when a failed test result occurs and enabled when a passed test result occurs.

Name	Description	Duration
Alcohol Tested		4 hours

Expire after: 4 hour(s)

OK Cancel Apply

7. Assign the Competencies to be managed by this Alcolizer. The Competencies listed here will be enabled for a Cardholder when a passed test result occurs and disabled for a Cardholder when a failed test occurs.

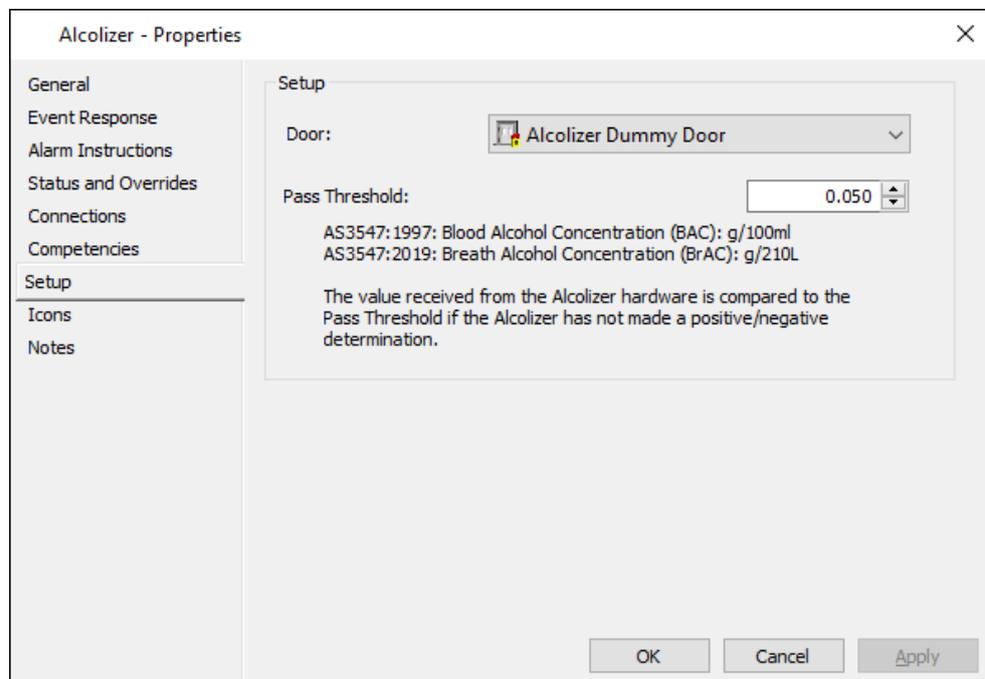

Note: Ensure that the Competencies assigned here have been added to the appropriate Cardholders (the Cardholders to be breath tested).

8. To have a previously-disabled Competency enabled for only a limited time after a passed test result, select the Competency and select the **Expire after** check box. Enter the period that the Competency will be enabled for. Maximum 99 minutes, 99 hours, or 10 days.

Notes:

- The **Expire after** setting does not apply to Competencies that were already enabled before the Cardholder passed the breath test.
- If the **Expire after** check box is unchecked, then after a Cardholder passes a breath test, the Competency will be enabled with no expiry.

9. Click the **Setup** tab.

10. From the Door drop-down list, select the **Door** that will initiate the Alcolizer unit.

Notes:

- When a Cardholder presents their card at the reader assigned to the Entry Zone of this Door, the Alcolizer unit is initiated for the Cardholder.
- If a Competency has been assigned to the entry Access Zone for this Door and that Competency is either disabled, expired, or missing for the Cardholder, access is denied. The Alcolizer unit will not be initiated for the Cardholder.

-
11. Configure the **Pass Threshold** as required.

Command Centre only uses this value to make a pass/fail decision if the Alcolizer unit does not send a positive/negative determination to Command Centre. In this case, if a Cardholder's BAC/BrAC result is greater than or equal to the 'Pass Threshold' value, they fail the breath test.

Unit of measurement: A single pass threshold value is used (rather than one for BAC and one for BrAC) because a value as a BAC measurement is approximately equal to the same value as a BrAC measurement (e.g. 0.05 g/100ml (BAC) \approx 0.05 g/210L (BrAC)).

12. Click **OK** to close and save your changes.

6.8 Assigning an Alcolizer to a Controller

Note: An Alcolizer is connected to the RS232 port of a Controller, so only one Alcolizer can be assigned per Controller.

1. From the **Hardware** window, open the properties of the Controller that the Alcolizer is connected to.
2. Click the **Serial Devices** tab, then select the Alcolizer that is connected to this Controller from the **Alcolizer** drop-down list.
3. Click **OK** to close and save your changes.

7 Events

This feature introduces the following events:

Event	Cardholder [Last Name, First Name] failed Alcolizer action at [Alcolizer]
Explanation	The Cardholder has failed a BAC/BrAC test at the Alcolizer. The event details state: <ul style="list-style-type: none"> - the Card Number that initialised the test - the Alcolizer result (Fail) - the Reading (alcohol content) - the Alcolizer unit serial number - the unit of measurement for the reading (BAC g/100ml or BrAC g/210L). Note: If the Alcolizer unit did not send a UOM, it defaults to BAC.
Event Group	Alcolizer Fail Result
Event Type	Cardholder Failed
Generated By	Command Centre

Event	Cardholder [Last Name, First Name] passed Alcolizer action at [Alcolizer]
Explanation	The Cardholder has passed a BAC/BrAC test at the Alcolizer. The event details state: <ul style="list-style-type: none"> - the Card Number that initialised the test - the Alcolizer result (Pass) - the Reading (alcohol content) - the Alcolizer unit serial number - the unit of measurement for the reading (BAC g/100ml or BrAC g/210L). Note: If the Alcolizer unit did not send a UOM, it defaults to BAC.
Event Group	Alcolizer Pass Result
Event Type	Cardholder Passed
Generated By	Command Centre

Event	Cardholder [Last Name, First Name] failed to complete Alcolizer Action at [Alcolizer]
Explanation	The Cardholder failed to complete a BAC/BrAC test at the Alcolizer. The event details state: <ul style="list-style-type: none"> - the Card Number that initialised the test - the Alcolizer result (the reason the test failed to complete)
Event Group	Alcolizer Warning
Event Type	Cardholder Alcolizer Action Error
Generated By	Command Centre

Event	[Alcolizer] failure - No response from Alcolizer
Explanation	The Alcolizer failed to respond to a command from the Controller. Check the Alcolizer is physically connected to the Controller and has power to the Alcolizer.
Event Group	Alcolizer Warning
Event Type	Failed to get valid Alcolizer Response
Generated By	Controller

Event	Action at [Alcolizer] failed to modify Cardholder [Last Name, First Name]
Explanation	The Cardholder record is already locked by the operator for editing. The event details display the Cardholder's field and new value that failed to be modified.
Event Group	Alcolizer Warning
Event Type	Failed to Modify Cardholder after Alcolizer Action
Generated By	Command Centre

8 Reporting

An operator can configure a Command Centre Activity Report or Configuration Client Activity Report to report the following Alcolizer events:

- Cardholder Failed
- Cardholder Passed
- Cardholder Alcolizer Action Error
- Failed to get Alcolizer Response
- Failed to Modify Cardholder after Alcolizer Action
- Failed to obtain COM Port

This procedure describes how to configure a Command Centre Activity Report to report all Failed Alcolizer Action events, for all Cardholders within selected Access Groups.

1. In Command Centre Client, select the **Reports** tab on the title bar.
2. Click the **Report Configuration** button on the toolbar.
3. Click **New Report**, then **Activity Report**.
4. Enter a name for the report in the **Name** field (e.g. Failed Alcolizer Events).
5. To configure the period to report on, complete the following:
 - Double-click the **Event occurred today** filter, located in the Filters panel. The Edit Condition dialog box displays.
 - Configure the desired reporting period. For example, to report all Failed Alcolizer Events within the last week, select **Last Week** from the Report Period drop-down list.
 - Click **OK**. The condition is updated in the Filters panel.
6. To report on all Failed Alcolizer Events, complete the following:
 - Click the **Insert Filter** button and select **Event Group or Type**.
 - Click the **Select Event Groups and Types** button, select the **Alcolizer Fail Result** check box, then click **OK**.
 - Click **OK**. The condition is added to the Filters panel.
7. To report on selected Access Groups only, complete the following:
 - Click the **Insert Filter** button and select **Cardholder Access Group**.
 - Click the **Select Access Groups** button and select the appropriate check boxes for the Access Groups you wish to report on.
 - Click the **Add Selection** button.
 - Click **OK**. The condition is added to the Filters panel.
8. Click the **Configure** button, located in the centre of the report preview. The Report Layout Configuration dialog box displays.
9. Add any additional columns you require to the report.
10. Click **OK** then **Save**.
11. To schedule the report and select a report output, refer to the topic "*Scheduling a Report*" in the Gallagher Command Centre Help.
12. To add the report to the Report toolbar (which allows quick access to regularly run reports), refer to the topic "*Report Favourites*" in the Gallagher Command Centre Help.

9 Upgrading

9.1 Upgrading this feature from vEL8.40 (or earlier) to vEL8.50

1. Perform a backup of your Command Centre system.
2. Exit Command Centre and stop the FT Command Centre Service.
3. Using the Windows **Programs and Features** utility, remove the program 'Gallagher Alcolizer' from the Command Centre Server and all Command Centre Workstations.
4. Upgrade Command Centre to vEL8.50.1677 (or later vEL8.50 release). Refer to the document "*3E0068 Release Note Command Centre vEL8.50.1677 (Upgrade Procedures).pdf*" located on the Command Centre installation media.
5. Unzip the new file you have been provided and run the installation executable **AlcolizerSetup_8.50.xx.msi** on the Command Centre Server and all Command Centre Workstations.
6. Restart the FT Command Centre Service and Command Centre.
7. Remove the old 'Alcolizer_v8.40.xx' DLL from the Controller's **Software** tab for all Controllers and click **Apply**, then remove it from the from the Device Software window.
Note: "No such part" alarms may be generated.
8. Upgrade the Controllers to vCR8.50.210623c (or later vCR8.50 release). Refer to the document "*3E2203 Release Note Controller 6000 vCR8.50.210623c.pdf*" located on the Command Centre installation media.
9. Open the Device Software window and add the new 'Alcolizer_v8.50.xx' DLL to the Controller's **Software** tab for each Controller connected to an Alcolizer unit. Click the **Apply** button.
10. Wait for the Controllers to restart.
11. Test to ensure this feature operates as before.

9.2 Upgrading this feature on vEL8.50

1. Perform a backup of your Command Centre system.
2. Exit Command Centre and stop the FT Command Centre Service.
3. Using the Windows **Programs and Features** utility, remove the program 'Gallagher Alcolizer' from the Command Centre Server and all Command Centre Workstations.
4. Unzip the new file you have been provided and run the installation executable **AlcolizerSetup_8.50.xx.msi** on the Command Centre Server and all Command Centre Workstations.
5. Restart the FT Command Centre Service and Command Centre.
6. Add the new 'Alcolizer_v8.50.xx' DLL from the Device Software window to the 'Customisations' grid on the Controller's **Software** tab of the Controller's properties.
7. Remove the old 'Alcolizer_v8.40.xx' DLL from the Controller's **Software** tab for all Controllers, and then from the Device Software window.
8. Click the **Apply** button.
9. Wait for the Controller to restart.
10. Test to ensure this feature operates as before.

10 Uninstallation

To permanently uninstall this feature, perform the following procedure:

1. Perform a backup of your Command Centre system.
2. Delete all Alcolizer Command Centre items.
3. Remove the 'Alcolizer_v8.50.xx' from the Controller's **Software** tab for all Controllers, and then from the Device Software window.
4. Exit Command Centre and stop the FT Command Centre Service.
5. Using the Windows **Programs and Features** utility, remove the program 'Gallagher Alcolizer' from the Command Centre Server and all Command Centre Workstations.
6. Restart the FT Command Centre Service and Command Centre.

11 Known issues

- **Controller offline**

This feature is a controller-based solution that can operate independently of server connectivity if required. If the Controller is offline from the server, the test results will not be received by the server until connectivity is re-established. That is, there is a possibility that if a Cardholder fails the test, the Cardholder could go to a Door where a test is not required, and as the entry Competency hasn't been disabled yet (by the server), could gain entry even though they shouldn't be allowed.
- **Door configuration**

The Alcolizer unit has no way to cancel the Alcolizer initialisation once it has begun. Therefore, Gallagher recommends that a timeout is set that allows enough time to take a test. If the next Cardholder badges, this will cancel whatever incomplete action is still being processed.
- **Record locks and conflicts**

A Cardholder record is locked from when an operator starts modifying the Cardholder details, until the changes are applied. This feature cannot modify (disable or enable) Competencies for locked Cardholders. The workaround for this is to enforce the following conditions:

 - Only modify a Cardholder's record if that Cardholder is unlikely to use an Alcolizer unit at the time of modifying the Cardholder's record.
 - If the above cannot be ensured, then it must be assumed that the operator's changes are of greater importance.
- **Upgrade causing Access Zone access modes to reset**

When upgrading this feature from a previous version, you should follow this release note's "*Upgrading*" section exactly. If you don't 'Apply' the removal of the old Alcolizer DLL before you 'Apply' the new Controller software and Alcolizer DLL, any Access Zones that are currently overridden may be reset to the access mode according to their Schedule. If required, you will need to override your Access Zones again.
