Gallagher Software Maintenance

Reduce cyber risk

Access the latest enhancements

Controlled expenditure with tailored agreements

Support regulation compliance

UPDATE...

We believe in providing more than just a security system, we continually re-invest 15% of our revenue back into Research and Development, as part of our commitment to revolutionise the way businesses protect, secure and manage their people and property.

Reduce cyber risk

Robust cyber security is built-in at every stage, and is the core to everything we deliver. We ensure our system is as cyber-secure as possible by:

- End-to-end encryption and authentication
- External and internal vulnerability testing
- System hardening and configuration advice
- Fully trained and certified installers
- Best practice security built in from product inception.

"It's a very easy decision for us to make, software maintenance protects us from emerging system vulnerabilities and helps us deliver on our commitment to keep staff and students safe".

Geoff Burns, Deputy Proctor, Otago University

Access the latest enhancements

We are continually improving the quality and performance of our software, releasing two versions of Command Centre a year.

Year	Command Centre version released	New features and enhancements
2023	V8.90	23
